

# Public Bicycle Rental System

You are provided hourly rental data spanning two years. The training set is comprised of the first 19 days of each month, while the test set is the 20th to the end of the month. You have to predict the total count of bikes rented during each hour covered by the test set, using only information available prior to the rental period.

## Data Fields:

datetime - hourly date + timestamp

season - 1 = spring, 2 = summer, 3 = fall, 4 = winter

holiday - whether the day is considered a holiday

workingday - whether the day is neither a weekend nor holiday
